SUMMARY :

Motivated Front-End Developer with proficiency in HTML, CSS, JavaScript, and Responsive Design. Dedicated to creating easy-to-use websites and improving my technical skills and knowledge.

TECHNICAL SKILLS:

- **Frontend** - HTML , CSS , JavaScript
- **Database** - MySQL

PROJECTS :

[\[Weather App \]](#)

Tech Stack : HTML , CSS , JavaScript , API

- The site simplifies weather searches by city or current location, enhancing user search time by 25% for quicker access with no privacy compromising issues.
- It delivers accurate, up-to-date weather details, including temperature, humidity, wind speed, and UV index, sourced from a reliable API, ensuring 98% data accuracy.
- The site is fully responsive, providing a seamless experience across devices, increasing mobile user retention by 15%.
- The compact, visually appealing layout adjusts to different screen sizes, ensuring a consistent user experience and turning down bounce rates by 20%.

[\[Live Cricket Score Provider\]](#)

Tech Stack : HTML , CSS , JavaScript , API

- Developed a live cricket score tracking website, updating 1000+ matches and fixtures, serving 500+ users with real-time data.
- Designed a live scoreboard with team names, runs, and overs, updating every minute for 800+ viewers.
- Utilized HTML, CSS, and JavaScript to create a responsive platform, ensuring fast load times and 99% uptime.
- Implemented real-time data handling with JavaScript, supporting 500+ concurrent users and delivering accurate match updates without delay.

[\[Email & Phone no. Validator \]](#)

Tech Stack : HTML , CSS , JavaScript , API

- Users can validate emails and phone numbers with just a few clicks, minimising validation time by 30% compared to manual methods.
- The site supports both types of validation, providing detailed domain and carrier information, improving accuracy by 20%.
- The fully responsive layout ensures a smooth experience across multiple devices, leading to a 15% increase in cross-device user engagement.
- Clearly labelled buttons and interactive elements allow users to quickly switch between email validation and phone validation , increasing process efficiency by 25%.
